PRAVEENKUMAR K

Java Developer

7639579850 | praveen19k12@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Java Developer with hands-on experience in Java, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, JDBC, and MySQL. Built a role-based leave approval application backend with a multi-stage approval workflow and an AI-driven reminder system using Spring AI. Skilled in developing RESTful APIs, layered backend architectures, and database-driven applications, with a focus on reliable, maintainable code.

Skills

- **Languages:** Java
- **Backend:** Spring Boot, REST APIs, JDBC, Hibernate, Spring Data JPA
- **AI / GenAI:** LLMs, Prompt Engineering, Spring AI
- **Frontend:** HTML, CSS, JavaScript
- **Database:** MySQL, MongoDB
- **Concepts:** OOPs, DBMS, Data Structures & Algorithms, API Integration
- **Tools:** Maven, Git, GitHub, Postman, Swagger/OpenAPI, Cloudinary, Render, Vercel

Experience

Full Stack Development Intern **March 2026 – April 2026**

NoviTech R&D

- Completed a full-stack internship on a real-world application, contributing to features across the user-facing interface and underlying functionality.
- Gained hands-on exposure to the complete frontend, backend, and database workflow, from responsive interfaces to server-side logic and relational data.
- Worked on real project tasks, strengthening debugging ability and confidence in handling end-to-end application workflows.

Projects

Leave Approval Application Source Code

Spring Boot, Spring Data JPA, Hibernate, MySQL

- Developed a role-based leave approval REST API with 50+ endpoints using Java 17, Spring Boot and Spring Data JPA, modeling 10 entities in MySQL for six user roles (Student, Mentor, HOD, Warden, Chief Warden, Admin).
- Structured the backend in a layered controller-service-repository architecture with DTOs and separate endpoints for students, mentors, HODs, wardens and admins.
- Designed a multi-stage approval workflow (Mentor → HOD → Warden) with stage-based routing, mandatory rejection remarks and a complete approval history for every leave request.
- Implemented asynchronous email notifications, in-app notifications and audit logging, with Bean Validation (custom date-range validator), global exception handling and Swagger/OpenAPI documentation.

HappiMoM – Health Tracking Application Source Code

Spring Boot, MySQL, Cloudinary, Spring AI

- Expecting mothers often struggle to keep health routines, safety reminders, and records in one place, relying on scattered notes or memory.
- Built a full-stack Health Tracking Application with Spring AI-powered reminders and personalized suggestions to help mothers monitor their health and safety throughout pregnancy.
- Developed Spring Boot REST APIs, used MySQL to store health records, and Cloudinary to handle photo, image, and report uploads; prompt-engineered LLM calls via Spring AI to generate personalized reminders.
- Users can log health details, receive timely AI-driven reminders and suggestions, and save photos and reports to revisit their pregnancy memories.

Certificates & Achievements

- Oracle Cloud Infrastructure Certified Foundation Associate – Oracle
- MongoDB – Gained knowledge of MongoDB and data storage concepts
- Java Programming (Infosys) – Learned Java programming, OOPs concepts, and real-world usage in companies
- Solved 200 problems on LeetCode, strengthening Data Structures & Algorithms and problem-solving

Education

B.Tech, Computer Science and Business Systems **CGPA: 8.71 / 10**

Dhaanish Chennai College of Engineering, Chennai
